21.  $2^x 3^x = 1296$

\_\_\_\_\_

**Solve.**

22. The population of a small farming community is declining at a rate of 7% per year. The decline can be expressed by the exponential equation  $P = C(1 - 0.07)^t$ , where  $P$  is the population after  $t$  years and  $C$  is the current population. If the population was 8,500 in 2004, when will the population be less than 6,000?
